

LinkedIn Announcement — *AI Systems Engineering: A Practical Bootcamp*

- **Status:** DRAFT — local only (not committed, not posted). Post from LinkedIn’s desktop composer.
- **License framing:** CC BY 4.0 (open-educational resource — “free, remix it, teach it, credit me”).
- **Primary time:** Tuesday **2026-08-25, ~08:00 Pacific** via LinkedIn’s native “**Schedule post.**”
- **Audience:** working software engineers moving into AI systems engineering.
- **Author / credit tag:** Robert Ioffe, explicitly crediting **@Andrew Ng** (tag version).

On the @Andrew Ng tag: in the LinkedIn editor, *retype* @Andrew Ng and pick “**Andrew Ng (DeepLearning.AI)**” from the **drop-down** so it actually notifies him — a hand-typed @Andrew Ng that isn’t chosen won’t ping anyone. There are several “Andrew Ng”s on LinkedIn.

0) Day-of checklist (90 seconds)

- ☐ Desktop LinkedIn → “Start a post.”
 - ☐ Paste **§1 POST BODY** (do **NOT** put the repo link in the body — it hurts reach).
 - ☐ **Attach book-local.pdf** (repo root) — LinkedIn turns it into a swipeable carousel.
 - ☐ Hit **Schedule** → **Tue 2026-08-25, 08:00 Pacific** (or Post).
 - ☐ As the **first comment**, paste **§2** (the link). Then reply to your own comment with the fallback line so it survives auto-hide.
 - ☐ Send **§6 (DM to Andrew Ng)** as a separate message.
 - ☐ **~3 days later**, post **§5 (second post)** — it usually out-performs the launch.
-

1) POST BODY

I just rewrote what an experienced software engineer actually needs to become an AI systems engineer and I released it. It's free, and openly licensed.

AI Systems Engineering: A Practical Bootcamp is a 30-working-day deep dive. It's built on a foundation of building and deploying AI apps, mastering software-engineering fundamentals, using coding as a tool.

I took his four pillars and turned them into a month-long engineering curriculum:

Week 1 - Build & deploy AI apps

Context engineering, RAG, evals, agentic workflows, taking it to production.

Week 2 - Engineering fundamentals

Architecture, data/state, reliability, security, performance & cost, testing.

Week 3 - Use coding agents

How they work, specification engineering, agentic dev loops, multi-agent systems, agent safety

Week 4 - Shape the build

Product thinking, MVP, user testing, production hardening -
what to build and how to ship it.

Written for working engineers. Full source, build tooling, and PDF in one place.

A big thank-you to @Andrew Ng - his skills map is the backbone of this.

Released under CC BY 4.0 - read it, remix it, teach it, even build a course on it. Just create

Link in the first comment. If one of these weeks is the hard part for you, tell me which one

2) FIRST COMMENT (the link — keep it OUT of the body)

Full book, source, and PDF:

https://github.com/riooffe/ai_systems_engineering_bootcamp (book.pdf / book-local.pdf - CC BY 4.0)

Fallback reply (post as a second, separate comment ~15 min later, in case auto-hide hides the first):

Book, source & tooling: https://github.com/riooffe/ai_systems_engineering_bootcamp

3) ATTACHMENT

book-local.pdf (repo root) — the two-level-TOC edition. Add as a document/upload so it becomes a swipeable carousel.

4) HASHTAGS (3–5, append to the post or the first comment)

#AI #SoftwareEngineering #LargeLanguageModels #AgenticAI #OpenSource

5) SECOND POST (~3 days after launch; pull one concrete idea)

Template — swap the bracketed idea for the week/idea you want to spotlight:

One idea from AI Systems Engineering: A Practical Bootcamp that keeps coming back to me:

[Pick one week/idea - e.g. Week 3 "specification engineering": in a coding-agent world, the not something it guesses at. 90-second version: ...one concrete technique...]

Which of the four tracks is the one slowing your team down - building apps, engineering fundamentals, using agents, or shaping the build? Drop it below.

6) DM TO ANDREW NG (send separately; low-pressure, no ask)

Hi Andrew - big fan of your AI Engineering Skills Map.

I just released an open (CC BY 4.0) 30-day curriculum, AI Systems Engineering: A Practical Bootcamp
https://github.com/rioffe/ai_systems_engineering_bootcamp

Thought it stood on your shoulders enough that you should know - no ask, just sharing.

- Robert Ioffe

Why the link goes in the first comment

LinkedIn downranks posts that contain external links **in the body**. Past: text-only body + link as comment #1. (This is the one detail most people forget.)

Reminder

A macOS **Calendar** event was created for **Tue 2026-08-25 08:00** — “Announce AI Systems Engineering book on LinkedIn.” Make sure **Calendar notifications** are on in System Settings → Notifications → Calendar.
